# Solutions for your most demanding applications

# Everflex

Eaton has been a pioneer in the production of hoses made with Teflon® resin. Everflex® hoses are ideally suited for use in applications where high and low temperature, chemical resistance, low coefficient of friction, flexibility, and non-aging characteristics are required. Since 1961, Everflex has been the premier brand of hose products made from Teflon resin for use in truck, chemical, hot melt, paper and pulp, hot presses, steam, packaging, paint, machinery and many other demanding applications.

Teflon<sup>®</sup> is a registered trademark of DuPont used under license by Eaton.

EATON Everflex Hose Catalog E-HOEV-BB001-E June 2016

# **Design considerations**

# Basic considerations in hose selection

### Smooth bore vs. convoluted

The primary differentiators between smooth and convoluted tubes are size and bend radius. Smooth bore hoses are generally only available in tube diameters of 26,9 mm or less, and they will have much greater minimum bend radii. For example, 26,9 mm smooth bore hose has a minimum bend radius of 228,6 mm while the same size convoluted hose has a minimum bend radius of only 76 mm. Convoluted hoses are also more resistant to collapse in vacuum. Smooth bore hoses tend to have a lower price than same-sized convoluted hoses.

### Fittings

Hoses made with Teflon can use crimp or reusable fittings. The choice is largely one of individual preference, since there are no significant performance differences between the systems. The convoluted hoses use a crimp fitting with a special insert design and factory-installed Teflon sleeve on the insert.

### Conductive vs. non-conductive Teflon

Hoses, typically fuel lines carrying lowviscosity hydrocarbons at high flow rates, tend to build-up static electrical charges that can arc through the Teflon to the braid. This can create a pin- hole in the Teflon. Specifying conductive Teflon will allow the static charge to bleed off harmlessly to the fitting.

### **Braid material**

304 Stainless is the baseline braid material for most hoses made with Teflon. 316 Stainless is the recommended material for marine hose applications.

# Why Eaton Everflex hose?

- Everflex hose made from Teflon resin has excellent temperature characteristics. It works well in high ambient, fluid or gas media temperatures for smooth bore hose +260°C (+500°F) and for convoluted hose + 204°C (+ 400°F). It works equally well in cryogenic applications for smooth bore hose -73°C (-100°F) and for convoluted hose -54°C (-65°F).
- Everflex hose has a broad range of chemical resistance. It is inert to most commercial chemicals, acids, alcohols, coolants, elastomers, petroleum compounds, solvents, vinyls, synthetic lubricants, and hydraulic fluids.
- Everflex hose withstands continuous flexing, vibration, or impulse
- Everflex hose is compatible with steam. It absorbs no moisture, hot or cold

- Everflex hose is noncontaminating conveyed materials, fluids, or gases will not contaminate in service. It is easy to clean and sterilize for FDA or pharmaceutical applications
- Everflex hose has high flow rates. Its low coefficient of friction with anti-stick properties insures continuous lower pressure drop during service with good pressure rating
- Everflex hose resists deterioration. It is impervious to weather and can be stored for long periods of time without aging
- Everflex hose has a long life expectancy when applied within its temperature and pressure ratings
- Everflex hose can handle many substances such as adhesives, asphalt, dyes, greases, glue, latex, lacquers and paints. It has no carbon build-up when used as a compressor discharge line

# Everflex smooth bore hose and fittings

Everflex smooth bore hose made from Teflon resin is specified in many of the most difficult applications across various industries. The extruded tube has excellent flex life, high temperature resistance and chemical resistance. Additionally, Everflex hose is an excellent choice in applications requiring steam cleaning of an assembly or transfer of a highly viscous media, such as adhesives, paints or food products.

The 304 stainless steel wire reinforcement provides the strength necessary to carry the working pressure and the durability to withstand harsh environments. The optional 316 stainless steel braid is ideal for more corrosive environments. High temperature hydraulic and pneumatic systems, such as those found in steel mills, foundries and transit buses, are ideal locations to offer Everflex hose as a problem solver. Materials meet 21-CFR-177.1550 for use in food handling applications.

# S-TW Series Smooth bore

Everflex S-TW series tube is reinforced with 304 or 316 stainless steel wire and has a minimum wall thickness of 0,76 mm. The minimum bend radius is measured in mm to the inside bend. 316 Stainless braid can be used in marine and other environments where corrosion is an issue.

## Construction

- Applications
- Non-conductive Teflon
   inner tube
- One or two layers of stainless steel wire braid
- Steam
- Compressor discharge
- Chemical transfer
- Meets SAE 100R14A

# **Temperature range**

- -73°C to +260°C (-100°F to +500°F )
- MARNING: These hoses can be used to convey hazardous chemicals, steam, hot liquids or other dangerous materials which can cause death, serious bodily injury including burns, pressure wounds or chemical exposure if released accidentally. They should, therefore, only be handled or worked on by personnel properly trained in the safe handling of the materials or chemicals conveyed in the hoses.
  - Aximum negative pressure for -16 and larger are suitable for hose which has suffered no external damage or kinking. If greater negative pressures are required for -16 and larger hoses, the use of an internal support coil is recommended. Use of an internal support coil in -06 and larger hose is recommended for tube support where extended or continuous service at high temperature together with low or negative pressure is expected.

## Construction

•

## Applications

Conductive Teflon inner tube

One or two layers of 304

stainless steel wire braid

provides a path to the hose end fittings for

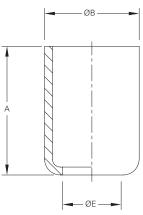

- Steam
- Compressor discharge
- Chemical transfer

# • Meets 100R14B

# Temperature range

- 73°C to +260°C (-100°F to +500°F)
- ▲ WARNING: These hoses can be used to convey hazardous chemicals, steam, hot liquids or other dangerous materials which can cause death, serious bodily injury including burns, pressure wounds or chemical exposure if released accidentally. They should, therefore, only be handled or worked on by personnel properly trained in the safe handling of the materials or chemicals conveyed in the hoses.
  - ◊ "Z" Designates a double braid of 304 stainless steel wire.
  - # Maximum negative pressure for -16 and larger are suitable for hose which has suffered no external damage or kinking. If greater negative pressures are required for -16 and larger hoses, the use of an internal support coil is recommended. Use of an internal support coil in -06 and larger hose is recommended for tube support where extended or continuous service at high temperature together with low or negative pressure is expected. For a list of internal support coils available, see page

# Everflex convoluted hose and fittings

Everflex Conv-O-Crimp 8000 and 8500 Series hose provides excellent performance, reliability and durability with tighter bend radii than smooth wall hose. When compared with large diameter rubber hose, Conv-O-Crimp is dramatically lighter weight, more flexible, and more resistant to heat and chemicals. The tube is fabricated with tape of Teflon and reinforced with 304 stainless steel wire. The result is a product ideally suited for

applications in truck and bus, chemical processing, food processing, hydraulics, pharmaceutical, tire manufacturing, steel mills, and many others. In addition to the standard 8000 Series virgin white tube of Teflon, the 8500 Series has an internal conductive static dissipating black liner that provides a path to the hose end fitting for applications where flow induced electrostatic charges can occur.

# Everflex convoluted hose and fittings 8000/8500 series

Additional to Conv-O-Crimp fittings the convoluted hose is also qualified with OTC fittings but not recommended for the conveyance of air or any other kind of gases.

### Construction

- Convoluted Teflon tube
   with 304 stainless steel
   wire braid reinforcement
- Temperature range
- -54°C to + 204°C (-65°F to + 400°F)

### Industrial applications

- Automotive
- Platen presses
- Pharmaceutical
- Bus & truck
- Reverse osmosis
- Hydraulics

**Crimp sockets** 

øЕ

- Chemical processing
- Steam, Air, Water
- Tire Manufacturing
- Electronics
- Steel mills
- Food processing
- Tank truck transfer

MARNING: These hoses can be used to convey hazardous chemicals, steam, hot liquids or other dangerous materials which can cause death, serious bodily injury including burns, pressure wounds or chemical exposure if released accidentally. They should, therefore, only be handled or worked on by personnel properly trained in the safe handling of the materials or chemicals conveyed in the hoses.

# Convoluted hose fittings

Conv-O-Crimp fittings

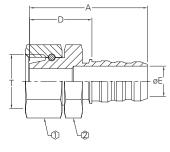

The unique Everflex Conv-O-Crimp hose end are shipped with factory-installed Teflon sleeves on the insert. This eliminates the time consuming, costly and subjective step of wrapping the hose end with Teflon tape before assembly. The end result is a hose assembly system that is second to none in ease of assembly fabrication.

# Chemical resistance chart

Key: 1- Excellent 2- Good 3- Not recommended 0- No information test before using

### **Partial list of chemicals**

This chart has been prepared as a guide only and is NOT a guarantee. The number of variables present in any particular chemical environment makes firm ratings impossible. Testing under actual service conditions is advisable in all cases to establish suitability of hose for a given purpose. End fitting material compatibility ratings are based on a fluid temperature of 70° and higher temperatures may accelerate adverse affects. Where unusual conditions exist, or where questions arise, please consult Eaton Technical Support for assistance.
